A, Description: involved in murein or cell envelope biosynthesis
A, Pathway: peptidoglycan biosynthesis
C;Superfamily: murg protein
C;Keywords: cell division; cell wall; glycosyltransferase; hexosyltransferase; peptidogl

Genetics:

```
C;Specijes: Neisseria meningitidis
C;Date; 31.Amr-2000 #sequence_revision 31-Mar-2000 #text_change 19-Jan-2001
C;Accession: A81201
C;Accession: A81201

-!- FUNCTION: Cell wall formation. Catalyzes the transfer of a GlCNAc subunit on undecaprenyl-pyrophosphoryl-MurNAc-pentapeptide (lipid intermediate I) to form undecaprenyl-pyrophosphoryl-MurNAc- (pentapeptide)GlcNAc (lipid intermediate II) (By similarity).
-!- CATALYTIC ACTIVITY: UDP-N-acetylglucosamine + MurZAc(cyl-L-Ala-gamma-D-Glu-L-Aye-D-Ala)-diphosphoundecaprenol = UDP + GlCNAc (1->4) -MurZAc (cyl-L-Ala-gamma-D-Glu-L-Lys-D-Ala)-diphosphoundecaprenol.
                                                                                                                                                                                                                                                                                 pyrophosphory1-undecaprenol N-acety1glucosamine transferase
(EC 2.4.1.227) (Undecapreny1-PP-MurNAc-pentapeptide-UDPGlcNAc GlcNAc
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       PATHWAY: Peptidolycan biosynthesis; last step. SUBCELLULAR LOCATION: Inner membrane-associated (By similarity) SIMILARITY: Belongs to the glycosyltransferase family 28. MurG

Submitted (DEC-2002) to the EMBL/GenBank/DDBJ databases.
-!- PUNCTION: Cell wall formation. Catalyzes the transfer of a GlCNAc subunit on undecaprenty-pyrophosphory!-MurNAc-pentapeptide (libid intermediate I) to form undecapreny!-pyrophosphory!-MurNAc-
-!- CATALYTIC ACTIVITY: UDP-N-acetylglucosamine + MurCAc(oyl-L-Ala-
gamma-D-Glu-L-Lyys-D-Ala-D-Ala)-diphosphoundecapreno! = UDP +
GlCNAC-(1->4)-MurCAc(oyl-L-Ala-gamma-D-Glu-L-Lyys-D-Ala)-

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     iitted (MAY-2002) to the EMBL/GenBank/DDBJ databases.

FUNCTION: Cell wall formation. Gatalyzes the transfer of a GlCNAC subunit on undecaprenyl-pyrophosphoryl-MurNAc-pentapeptide (lipid intermediate I) to form undecaprenyl-pyrophosphoryl-MurNAc- (pentapeptide) GlCNAC (lipid intermediate II) (By similarity).

(pentapeptide) GlCNAC (lipid intermediate II) (By similarity).

GATALYTIC ACTIVITY: UDP-N-acetylglucosamine + MurCAC (Oyl-L-Ala-gamma-D-Glu-L-Lys-D-Ala-D-Ala)-diphosphoundecaprenol = UDP + GlCNAC (l)-+4)-MurCAC (Oyl-L-Ala-gamma-D-Glu-L-Lys-D-Ala)-
                                                                                                                                                                                                                                                                                                       MUNNUL:

Catalyzes the transfer of a GlcNAc subunit on undecaprenyl-pyrophosphoryl-MurNAc-pentapeptide (lipid intermediate I) to form undecaprenyl-pyrophosphoryl-MurNAc-(pentapeptide) GlcNAc (lipid intermediate II) (By similarity). CATALYTIC ACTIVITY: UDP-N-acetylglucosamine + MurZAc(cyl-L-Alagamma-D-Glu-L-Lys-D-Ala-D-Ala)-diphosphoundecaprenol = UDP + GlcNAc-(1-44)-MurZAc(cyl-L-Ala-GlcNAc-(1-44)-MurZAc(cyl-L-Ala-GlcNAc-(1-44)-MurZAc(cyl-L-Ala-GlcNAc-(1-44)-MurZAc(cyl-L-Ala-GlcNAc-(1-44)-MurZAc(cyl-L-Ala-GlcNAc-(1-44)-Ala-Bamma-D-Glu-L-Lys-D-Ala-D-Ala)-

Submitted (JUN-2003) to the EMBL/GenBank/DDBJ databases.

-! FUNCTION: Cell wall formation. Catalyzes the transfer of a GloNAc subunit on undecaprenyl-pyrophosphoryl-MurNAc-pentapeptide (lipid intermediate I) to form undecaprenyl-pyrophosphoryl-MurNAc-

(pentapeptide) GloNAc (lipid intermediate II) (By similarity).

-! CATALYTIC ACTIVITY: UDP-N-acety1glucosamine + Mur2Ac(oyl-L-Ala-gamma-D-Glut.L-Lys-D-Ala-)-diphosphoundecaprenol = UDP + GloNAc (1-*4)-Mur2Ac(oyl-L-Ala-gamma-D-Glut.L-Lys-D-Ala-D-Ala)-
